The incidence of multiple myeloma (MM), the only incurable malignancy of the B-cell lineage, has increased dramatically in recent years. The precise etiology of myeloma is unknown but it is likely that multiple factors, genetic and environmental, are involved in the pathogenesis of this disease. Recent studies have begun to shed light on the genetic changes

that occur in myeloma. Somatic mutations in the immunoglobulin (Ig) gene rearrangements have long been recognized to play a role in the initiation of myeloma. 6d1f23a050
